

MINI LIBRA REMOTE HEAD

SPECS

The Libra MINI is a true baby brother to the main Libra system. All functions of digital remote performance and full 3 axis stabilisation are identical to the Libra but in a much smaller, lighter package. The MINI is also sealed for extreme weather use, has full MOCO facility and has built in wireless capability. Designed to be used in tough, demanding applications where smaller Digital cameras can be used. The MINI is an open platform built around RED Epic or Dragon, Sony F55 or similar size camera systems. Prime lenses or short zooms preferred to keep the whole package small and usable where ever you can fit it.

LIBRA MINI UPRIGHT/SUSPENDED
